La Grange, Texas

Certified Applicator(s):

Brace Integrated Services, Southwest
BRACE Industrial Group of companies provide diversified and integrated industrial services within the power generation, agriculture, maritime, commercial, petrochemical and oil & gas markets.

Owner:

LCRA

Date of Project:

August 2015

Product(s):

Raven 562 used as primer
Raven 512 used as topcoat

Type of structure(s):

Fly Ash Silo

Condition of Structure(s):

The structure had multiple leaks at penetrations through the concrete that caused the fly ash inside the silos to become wet.

Size/Cost:

4,000 sq. ft.
\$49,688.70

Description of Application:

Raven 512 was sprayed at 50-60 mils then broadcasted with 20/40 grit and sprayed an additional 20-30 mils to encapsulate the broadcast media. Coating was very user friendly and easy to apply. The fast drying time helped tremendously with the application being on a surface intended for foot traffic.

La Grange, TX Fly Ash Silo

It was an inexpensive way to fix the problem they had with their production at the power plant. The leaks caused the fly ash to become wet causing costly shutdowns, which resulted in the silo having to be cleaned out.
